

NATURAL ACETALDEHYDE

Your referent partner
for natural european
quality

A colorless and volatile liquid, Natural Acetaldehyde from Ennolys brings fresh notes and enhances fruity flavors, particularly **green apple**. This makes it of particular interest to the **beverage and sweet goods industries**.

Ennolys has been producing this natural aromatic molecule by **FERMENTATION** for more than 30 years at its site in Soustons (France). Today, the company is the referent partner for natural European quality.

SAFETY FIRST

Pure acetaldehyde is highly volatile and flammable, making it challenging to handle. Ennolys' acetaldehyde is no exception when it comes to safety. All stages of the production and process are designed with **safety as the top priority**.

Packaging has been optimized for maximum safety, using returnable and re-usable **Stainless-Steel drums**. Ennolys can also provide connection equipment, filling studies, and **on-site technical support** to facilitate the safe use of acetaldehyde at your production facility.

Delivery is made via carriers specializing in hazardous raw materials. With Ennolys' strong safety track record, you can trust that your acetaldehyde supply will be responsibly managed.

NATURAL ACETALDEHYDE BLENDS OFFER

To further enhance safety and ease of use, Ennolys offers natural acetaldehyde blended with various solvents:

Acetaldehyde - Ethanol

Reduces volatility and risk of ignition

Acetaldehyde - Orange Terpene

Modulates and enriches the aroma profile

Acetaldehyde - Water

Improves stability during transport and storage

Acetaldehyde - Propylene Glycol

Provides a "halal-friendly" option

These blended products allow for better control of aroma diffusion and intensity in your flavor formulations. Other solvents may be used upon consultation.

ENVIRONMENTAL COMMITMENT

Ennolys is dedicated to sustainable production practices. Acetaldehyde is packaged in returnable and refundable **Stainless-Steel drums** (15kg or 150kg). Additionally, our production site releases less than 1g/h of acetaldehyde into the environment - a fraction of the regulatory limit of 10g/h. **With Ennolys' natural, high-quality acetaldehyde and our focus on safety and environmental responsibility, you can feel confident in choosing us as your trusted supplier.**
